

Wood Pellets Ayrshire

WHY USE WOOD PELLETS - HORSE BEDDING

1. Wood Pellets Ayrshire 's pellets are 100% sterile.
2. Wood pellets will dramatically reduce your bedding consumption.
3. Solid manure separates so easily from the fine wood fibres.
4. These fine fibres are very low in dust, free of allergens.
5. Our bedding is much more absorbent than shavings.

Directions

A 12 x 12 stable will require approximately 8 to 10 bags of bedding to setup from scratch. If you aren't on rubber mats or if you are fond of large banks you should add more bags to compensate.

Once you've laid the pellets in your bed you will need to add approx 1/2 a bucket of water for each bag that you have put in. This will transform the pellets into the soft, dry, absorbent bedding your horse will bed down on.

Once you've converted a stable to wood pellet Bedding you shouldn't need to add any more bedding for the next week or so, after this period a typical stable will require 1 to 2 bags of bedding every 5 to 7 days or so.

Will using Wood-Pellets-Ayrshire Bedding actually save me money?

Using Wood Pellet bedding should save you heaps of money. Apart from the very obvious difference in the upfront cost of the bedding you should realize large savings in your labour cost - anywhere from 30% - 50%. Additionally you will be removing anywhere from 30% -50% less volume from your stables as well which should reduce your muck heap removal costs as well!
